

UPCOMING BEETLE PLANS

In response to the advancement of the mountain pine beetle Spray Lake Sawmills has undertaken a modeling exercise to assess forest stand susceptibility to the beetle. The modeling outputs together with consultation with Sustainable Resource Development has shown some high priority areas which will require us to modify our harvest sequencing to some new areas.

The urgency of the beetle epidemic has required a condensed timeline for plan development. Effected stakeholders will be contacted by Spray Lake over the next couple of months and, once prepared, harvest plans will be made available for public review and comment.

Over the next month and a half these articles will attempt to address some of the more commonly asked questions in relation to the mountain pine beetle and our emerging plans to combat the beetle.
